

AI AS YOUR ASSISTANT

Build Your Business Brain

Your prompt cheat sheet. Copy, paste into your AI, and go. Works in ChatGPT, Claude, Gemini, and Copilot.

BLOCK 1 • THE SPINE — TEACH IT WHO YOU ARE

PROMPT 1 • WHAT DOES IT KNOW ABOUT YOU?

Paste into a blank chat first. Then ask: did you like that answer? Did it actually know you?

Based on everything you know about me and my business, tell me who I am, who I serve, and what makes me different.

PROMPT 2 • THE FIX (5-MINUTE INTERVIEW)

Didn't love that answer? Paste this, spend 5 minutes answering, give it your business, goals, and voice.

You're about to become the brain of my business. Not a chatbot I bark orders at, a second brain that knows my business almost as well as I do.

Right now you know nothing about me. So before you write a single word for me, you're going to learn my business the way a sharp consultant would on day one.

Interview me. One question at a time, and wait for my answer before the next one. Start with the 6 questions that teach you the most about:

- who I am and why I started this
- who I serve and what they're really struggling with
- what I sell and what makes me different
- what I stand for, the values I won't compromise on
- how I talk

If an answer is thin, dig once, then move on. If I get stuck, hand me a few options to react to so I'm never staring at a blank screen.

Make one of those questions count: ask me to paste something I've actually written, an email, a post, a reply to a customer. Study it. Learn my voice, my rhythm, the words I use and the ones I'd never be caught saying. When you write as me later, I shouldn't be able to tell it wasn't me.

Six questions is just the floor. When you've covered them, ask me if I want to keep going deeper or wrap up. If I want to keep talking, follow my lead. The more I give you, the sharper you get.

When I'm ready, stop asking and write me a "Business Brain Profile" with these sections: Who I Am, Who I Serve, What I Sell, What Makes Me Different, What I Stand For, My Voice, and Never Do This.

Start with question one. Just one.

PROMPT 3 • THE WRAP-UP (IF YOU'RE RUNNING LONG)

We've covered enough. Stop interviewing me and write my Business Brain Profile now, based on everything I've told you so far, using those same sections.

BLOCK 2 · THE HANDS — PUT IT TO WORK

PUT IT TO WORK (RUN THIS INSIDE YOUR NEW PROJECT)

Using everything in my Business Brain Profile, do this for me: **[describe the task]**.

Write it the way I'd actually say it to a customer, not the way a marketing agency would. If a line could be any business, rewrite it so it could only be mine. No buzzwords, nothing that smells like AI. First draft, we'll sharpen it together.

THE COACHING PALETTE — THE FIRST ANSWER IS NEVER THE FINAL ANSWER

Make it shorter. Cut it in half.

Give me 3 different versions.

More casual, like I'm talking to a friend.

Rewrite it the way I'd actually say it.

More professional, but still human.

Make it sound less like AI.

Punchier. Stronger hook in the first line.

Add a clear call to action at the end.

GIVE IT A HOME (STOP LIVING IN ONE LONG CHAT)

BLOCK 3 · THE NERVOUS SYSTEM — WIRE IT INTO YOUR BUSINESS

THE FOLLOW-UP BRAIN (FIX THIS FIRST)

You're my follow-up assistant. I'll tell you about a client or conversation, and you'll write the follow-up in my voice that moves things forward without being pushy.

Here's the situation: **[who they are, what we discussed, what I want next]**.

Write the follow-up message. Then give me a shorter version I could send as a text.

THE EMAIL BRAIN

You're my email assistant. Here's an email I got: **[paste it]**.

Draft my reply in my voice. I want to say: **[your gist, or "help me figure out what to say"]**. Keep it **[warm / brief / firm]**. Then suggest a subject line.

THE CALENDAR & PLANNING BRAIN

You're my planning assistant. Here's everything on my plate this week: **[dump your to-dos, meetings, deadlines]**.

Build me a realistic week, day by day. Protect time for **[the thing that actually grows my business]**. Tell me what to drop or move if it's too much.

BONUS · FIND YOUR MONEY LEAKS

Drop your P&L into a Project, then run this. No need to put your company name on it.

I've added my Profit and Loss to this Project. Go through it like a sharp CFO who's on my side. Find where I'm bleeding money: line items too high for a business like mine, costs that jumped from last year, and anything redundant. Give me the biggest leaks in plain English, what each one is costing me, and one fix for each. Then tell me the one change that puts the most money back in my pocket.

Feed Your Brain — keep it alive past today

1. Every time it nails something, **save the prompt**.
2. Every time it misses, **tell it why**. Inside a Project, it remembers.
3. Paste in your wins: a great email, a post that worked, a happy review. That's voice training.
4. Run **deep research on your own business**. See yourself from the outside. Fix the gap.
5. Build **one new brain a week**. Follow-up, then email, then calendar, then the next.

You are the heartbeat. The brain handles the busywork so you can do the work only you can do.
