The Daily AI Workflow

This is the cleaned-up version of the comment thread: the recurring AI-assisted workflow Jayson uses to move faster without letting the business run on autopilot.

1

Brief

Emily ranks the inbox by urgency and drafts replies in Jayson's voice.

2

Convert

Granola captures meetings, then Emily turns them into next actions.

3

Prioritize

AI reviews the day and flags what actually moves money this week.

4

Act

Jayson reviews, edits, approves, calls, posts, and assigns the work.

What makes it different

AI prepares the room.

The assistant gathers context before the human walks into the decision.

The owner still decides.

The system drafts, ranks, and summarizes. Jayson still reviews what goes out.

The work lands somewhere.

Every meeting, voice note, and idea turns into a task, post outline, sales note, or client action.

Seven Ways He Uses It

Inbox

Emily briefing

Ranks messages by urgency and drafts replies in the tone and structure Jayson prefers.

Meetings

Granola + Emily

Transcribes the conversation, summarizes it, then turns it into what needs to happen next.

Client topics

Content intelligence

Pulls interesting topics for every client, then checks accuracy and whether people would care.

Dashboard

AI operations check

Reviews the dashboard and flags whether client insights are running clean.

Sales calls

Pre-call research

Pulls the business, reviews, website, and recent posts so leaks are visible before the call.

Voice notes

Talk-to-task

Turns between-appointment phone notes into task lists, post outlines, or follow-up notes.

7. Priorities

Runs the day's to-do list past AI and asks what actually moves money this week. Everything else waits or gets delegated.

Build Your Version

1

Inbox briefing

Act as my executive assistant. Review these emails, rank them by urgency, summarize what matters, and draft replies in my voice. Do not send anything without my approval.

2

Meeting to next actions

Turn this meeting transcript into: decisions made, promises we made, client promises, open questions, deadlines, and the next three actions.

3

Client topic mining

Review these client notes and recent posts. Pull five content topics people would actually care about, then flag anything that needs fact-checking.

4

Money-moving priorities

Here is today's task list. Sort it into: moves money this week, protects current clients, can wait, and should be delegated.

How The Morning Runs

Before opening email

Inbox brief

Emily groups what is urgent, what can wait, what needs a decision, and what can be drafted.

After meetings

Transcript handoff

Granola captures the meeting. Emily turns it into promises, follow-ups, and tasks.

Before client work

Topic pull

AI surfaces useful client topics, but accuracy and audience interest get checked before production.

Before sales calls

Leak review

Website, reviews, social posts, and recent activity are reviewed so the call starts with context.

End of day

Priority reset

The task list gets sorted by what moves money this week. Everything else waits or gets delegated.

What To Set Up First

ASSISTANT ROLE

Executive assistant

EMAIL WORKFLOW

Urgency + drafts

MEETING WORKFLOW

Transcript -> tasks

CONTENT WORKFLOW

Topic mining

SALES WORKFLOW

Pre-call leak review

PRIORITY WORKFLOW

Moves money this week

Minimum setup

1. One assistant with your voice rules
2. One meeting recorder
3. One task system
4. One client dashboard

5. One weekly priority review

Important guardrail

AI drafts and organizes. A person approves replies, checks facts, owns client judgment, and makes the final call.

Build This In Your Business

Start with the work that already repeats every week. Do not automate everything. Build one useful assistant workflow, prove it helps, then add the next layer.

- ☐ Write down your assistant's role and boundaries.
- ☐ Create voice rules from five real emails you already sent.
- ☐ Choose where meeting transcripts will land.
- ☐ Define what counts as an action, decision, promise, or blocker.
- ☐ Create a client-topic review that checks usefulness and accuracy.
- ☐ Build a pre-call research checklist for sales conversations.
- ☐ Sort your task list by what moves money this week.
- ☐ Review everything before AI-written work leaves the building.
